A Table to knowe what Planet rules euery howre, eyther by day or night folio,83
A table to know ỹ length of ỹ planetary houres, 84
A figure shewing the same more easier and readier without tediousnes. folio,86
The properties & inclinations of the planets, 88
The names of all the Colledges and Halles, in bothe vniuersities, Oxforde and Cambridge, 93
The Shires, Cities & Boroughes, that haue place in the Parliament, with all the parish Churches contained in eache Shyre. folio,97
The names of all the Bishoprickes in Englande and Walles. fol,101
The names of the wardes and parishes in London. folio,103
All the principall fayres, in a more orderly maner then hath beene heeretofore set forth fol,106
The highwayes also from one towne to another, much larger then hath been set forth before, fol,115

A perfect rule to know the 5. Lawe dayes in the Court of Arches, the Audience of Canterburie, and the ſpirituall and Ciuill Lawes throughout the yeere.

Michaelmas Terme.

S. Fayth	All ſoules	S. Andrewe
S. Edward	S. Martin	Concep. of
S. Luke.	Edmond king	our Lady
S Simond & Iude	Katherine,	

Ye muſt well vnderſtand that the firſt day enſuing, each of the feaſtes ſette downe before euerye Terme, the Court of Charches is kept in ꝑ fore noone at Bowe Church, and in the after noone the ſame firſt day, is kept in Southwarke the Admirall Court for Ciuill cauſes.

The ſecond day after eache of theſe feaſtes, the Audience Court of Canterbury, is held in ꝑ Conſiſtory in Paules in the forenoone, and the Prerogatiue Courte of Canterbury is kept in the ſame place in the ſame after noone the ſame day.

The third day following any thoſe feaſtes, the Biſhop of Londons Court of Conſiſtorie is holden in Paules in the forenoone, and in the ſame place is the Court of the Queenes highnes Commiſſioners vpon appeales, and the Court of Delegates holden in the after noone the ſame third day.

Hillarie Tearme.

S. Hillarie	S. Scolaſtie.	S. Chadde
S. Wolſtan	S. Valentine	Perpetua & fæ.
Conuer. of Paule	Aſhwedneſday	S. Gregorie
S. Blaſe	S. Matthie	Ann. of our L.

¶ Understande that the foure first Feastes of this Tearme be neuer chaunged, but are certaine, the other are sometime kept, and sometime omitted, after the course of the yeare altered. And if it so chaunce, that one of those Feastes be Ashwednesday, that are after saint Blase day, so that the same Lawe day after Ashwednesday cannot bt kept, because the Law day of the other feast dooth light on the same day: the second Lawe day after Ashwednesday shall be kept, and the other omitted.

¶ And if the Lawe day after ashwednesday be the next day after saint Blase, then shall all and enery of those dayes bee obserued in order, as they may be held conuenientlie.

¶ And note, that although Ashwednesday bee the seauenth in order, yet it hath no certaine place, but is chaunged as the feast of Easter causeth it.

Easter Tearme.

The 15. day after Easter, } Gordiane.
Saint Alphege, }
Saint Marke Euangelist. } Saint Dunstone,
Inuention of the Crosse, } Ascention day.

¶ In this Terme, the first sitting is alwaies kept the Monday being the xv. day after Easter, and so after the feasts heere noted, which shall next followe by course after Easter, and the like space being kept betweene other feastes, the rest of the lawe daies are kept the thirde day after the Ascention, which is the last of this Terme. And if it happen that the Ascention day do come before any of those feasts aforesaide, thē they are omitted for that yere. And likewise, if any of those dayes come before the 15. day after Easter, those dayes are also omitted.

Trinitie

Trinitie Sunday,	S. Botolphi	
Corpus Christi,	S. Iohn	S. Swithine.
Boniface Bishop	S. Paule	S. Margaret
S. Barnabe.	Tran. S. Thomas	S. Anne.

¶ Remember that the Lawe dayes of this Terme are chaunged by the meanes of Penticost, and the first sitting is holden alwayes the first day after Trinitie Sunday, and the second law day is holden ꝑ first day after Corpus Christi day, except it fall on some day above named which chaunceth sometime, and then the sitter day is kept, and after the second Session, account foure dayes or there about, and then looke which is the next Feast, and the first lawe day after the saide feast, shall bee the third session. The other lawe dayes followe in order, but so many of them are kept, as for the time of the yeere is thought meete. And note generallie that euery day is called a law day, that is not sunday or holy day, and that if the Feast day bee not knowne of any Court day in any Terme, the first or second day following be Sunday, then ꝑ Court day is kept after the saide holy day or feast.

First of all, these dates are not altered, except they light on Sunday, or some holie day, and euery day is called a law day vnlesse it be sunday or holy day.

8. ¶ A necessary and perfect Rule to knowe when the Tearmes beginne and ende, and how many returnes are in euery Tearme.

Eyght dayes before any Terme bee, the Exchequer openeth for certainty. Except the Terme of of Trinitye, that openeth but foure dayes before truely.

Hillary Terme beginneth the 23, day of Januarie, if it be not Sunday, then the next day after, and endeth the 12, of Februarie.

Octabis Hillarii. } {Crastino Purific.
Quind Hillarii. } {Octabis. Purific.

Easter Terme beginneth xbij, dayes after Easter, & endeth foure dayes after the Ascention day

Quind Paſch } {Menſe } Quinque Paſchæ
Tres Paſchæ } {Paſchæ } Craſt. Aſcention

Trinity Terme beginneth the next day after Corpus Christi day, and endeth the wednesday fortnight after.

{Craſt. Trinitatis, } {Quind. Trinitatis
{Octabis Trinitatis } {Tres Trinitatis

Michaelmas Terme beginneth the ninth of October, if it be not Sunday, and endeth the twentis and eyght of Nouember.

Octabis Michaell } {Craſt, anima.
Quind Michaell } {Craſt, Martini
Tres Michaell } {Octa. Martini.
Menſe Michaell } {Quind Martini.

In this Calender folowing, you shall oftentimes find these Letters B. and E. The which signifyeth such dayes as the Egyptians note to bee daungerous to begin or take any thing in hand, as to take a Journey, or any such thing.

Ianuary hath 31. daies.

The Moone 30.

VVarme meates this Month conuenient be,
VVhite wine also as wholesome is:
Fly sloth, sweet drinks, be ruled by me,
Bleede not, but bathe, forget not this.

An instruction for the perfect vnderstanding of the manner and order of the Computation, and other Tables hereafter following.

THe order of this Booke, and the matters therein contained, are as followeth.

¶ First, herein is a perfect Rule to know the beginning & ending of the Termes, both of the Ciuil Law, and Common Law.

¶ Then followeth a Kalender, wherein are obserued the old Saints dayes, not of superstition, as though euery of thē mencioned in the said Kalender were a Saint, (for of some is knowne the contrary: neither if they were all Saints, are they therefore placed in this Kalender,) but because it hath beene a custome of auncient time to vse their names, in signifying and making certain the dates times, and Termes of the yeere, as by the dating of diuers olde Deedes, Euidences, and Records will appeare. And because the same custome is yet remaining in the returning of writs and processes, and also is commonly vsed in the noting & setting forth of the principall Faires and Markets, and all the seasons of the yeere, those names serue well for the purpose, and therfore might not conueniently haue beene left out. And vnto the sayde Kalender are added ỳ Callends, Nonas, & Ides, because diuers Euidences are dated on those dates and by those words, and therunto also are added, the vigiles & Festiuall dayes, moreouer, the very

degree

degree and signe that the sunne is in euery day of the yere, according to his middle mouing truelie supputated, so that hauing this Booke, there shal be no occasion to call for any other Kalender.

¶ The beginneth the Computation of yeres, wherein is to be noted, that euery page therof is deuided into seauen seuerall colouns or places, as may appeare by the Tytles ouer euery of theyr heads. In the first place are the yeres of our Lord. In the second the Prime. In the third the Epact. In the fourth the Dominical Letter, & the Leape yere, whensoeuer it happeneth. In the fift are the names of the Kings as they raigned, beginning with William the Conquerer. &c. And in the same place also are the Monthes that euery of thē entred into their raignes. And in the sixt are ye dayes of the Monthes that euery of thē began to raigne in. And in the seauen and last, are the yeeres that euery of them raigned.

¶ Also in the raigne of euery King, is shewed the day of his death, if he died being King, or the day of hys deposition if he were deposed, with a true account how many yeres, Monthes, weekes or dayes he raigned.

¶ And heere I thinke it meete to declare somewhat of the commoditie and necessary vse of the Computation afore mencioned. And for the better instruction & vnderstanding therof, I wyll moue certaine Questions, & giue aunswere to the same in such sort, as shall so utter the order and maner therof, (as it were by examples) that I doubt not, but the true and necessary vse of the same, shall plainly appeare to all men.

Question

1 Question.

¶ I would know by this Computation in the fourth yere of King Edward the first, what was then the yere of our Lorde, the Prime, the Epact, Dominicall Letter, and the Month and day that he began his raigne in, & what day in the weeke the same was.

Aunswere.

¶ Among the Kings, seeke out for King Edward the first, and then looke for the fourth yere of his raigne, and there it appeareth to be the yere of the Lord 1275. The Prime 3. The Epact 3. The Dominicall Letter F. The Month that he began his raigne in, November, and the 16. day, which day that yeere was Saterday, as is easie to be knowne if you looke in the Kalender for the 16. day of November, accounting F. for Sunday, then that day must needes be Saterday, and so of all other the like.

2 Question.

¶ An Evidence dated the 15. Kalends of December in the third yere of King John, I would know what day of the Month the same was, and how long it is since.

Aunswere.

¶ First looke in the Kalender in the Month of November for the Kalends of December, & there you

you shall find the xv. Calends of December is on the xvij. day of Nouember. Then seek in the Computation for K. John, and you shall find that the third yeere of his raigne, was in the yeere of our Lord 1201. And then set downe this yere of our Lord, wherein y question is asked, which is 1571. and take out therof 1201, and there resteth 370. And so it must follow, that vppon the xvij. day of Nouember next, it shall be sithen the third yere of king John, 370. yeeres, and thus of the lyke.

3. Question.

¶ An Euidence dated the second Sunday in Lent, in the fourth yeere of K. Stephen, I would know in what yeere of our Lord the same was, and also in what month, and on what day the second Sunday in Lent was then.

Answere.

¶ First looke among the kings for king Stephen, and when ye haue found him, then looke for the fourth yeere of his raigne, and there you shall find the yere of our Lord to be 1138, & the Prime 18, and B. the Sundaies Letter. Then go to the Table that teacheth to know Easter day, and all the moueable feastes, which is the next Table saue foure after the Computation.

And there vnder the Title of Prime, seeke among those numbers for 18. And when you haue found it, looke downeward frō the lyne where the Prime standeth, and seeke for the next B, which that yeere was the Sundaies Letter. And when you haue found B. goe forward in y lyne, & there you shal find the 20. day of Februarie to bee that

yeere

yeere the first Sunday in Lent, and therunto put seauen dayes for one weeke more, and that sheweth that the second Sunday in Lent, that yeere, was the 27. day of February. Then set downe this present yere of our Lord, 1571, and take out thereof the yeere of our Lord that was then, which was, 1138. and there resteth 433. And so it doth plainly appeare, that the 27. day of Februarie next comming, it shall be 433. yeeres sithen the fourth yeere of the raigne of King Stephen. And thus you may do with the like.

4 Question.

I haue a Lease for lxx. yeeres, that began at Michelmas in the xviii. yeere of King Henrie the 7. my desire is to knowe thys present yeere 1571. whether my Lease be expired, or how many yeeres I haue to come.

Aunswere.

First in the Computation, looke among the Kings for king Henry the 7. and then for the 17. yeere of his raigne, which you shall find to bee in the yeere of our Lord 1501. The which number take out of this present yeere of our Lord, 1571, and then resteth 70. so many yeeres of the said Lease shal be expired at Michelmas next, & then shal remaine 10. yeres to come, and so of the like.

5 Another question and plaine example, meete for such as cannot extract one number out of another.

A lease dated the 6, of July, in the 31. yere of the raigne of King Henry the 8. for the terme

of xxi. yeeres, that began at our Lady day in Lent then next following: I would now know whether the said lease be expired, or how many yeeres there are to come.

Aunswere.

First looke in the Computation among the Kings for King Henrie the eyght, & for the xxi. yeere of his raigne, which you shall finde to bee in the yeere of our Lord, 1539. Then at the next yeere following begin to reckon, and cal that one, and so tell down in order all the yeeres following and end with this present yeere 1571. And the whole, you shall find the number of 32. And so many yeres of the said lease shalbe expired at our Lady day in Lent next comming. And at that time there shall remaine to come of the said lease, viii. yeeres, and thus you may account the yeres of any Lease.

Another very plaine question or example, easie for all men to conceiue, and in this time is commonly vsed.

A Lease dated the 17. day of August, in the v. yeere of the raigne of King Edward the 6, for the terme of xxi. yeres, which began at Michelmas the next following. I aske the question this xij. day of August 1571, whether the layd Lease be expired, or how many yeeres are yet to come.

Aunswere.

First in the Computation among ✠ kings, seeke for king Edward the vi. and for the v. yere of his raigne, and there you shall find the yere of our

our Lord to be 1550. Then beginne at the next yeere after, which is 1551, and call that one, and so tell downward all the yeeres, to thys present yeere 1571, and in the whole you shall finde xxi. which plainly declareth, that at Michelmas next the aforesaid terme of xxi. yeeres shall be fully expired. And this you may doo in the account of all termes of yeeres.

¶ Note also that in the said Computation diuers of the kinges haue in the first yeere of their raigne, no yeere of our Lord. The cause is, that they began in the same yeere that the former king dyed in. And therefore when you tell the yeeres, doo not reckon them y haue no yeere of our Lord.

¶ Note also that the yeere of our Lord after the Computation of the Church of Englande, beginneth euer the xxv. of March, which is the day of the Annunciation of our Lady.

¶ Note also, that when you account anie terme of yeeres, that the same terme y your Lease first began in, must end and finish in the last yeere of your reckoning at the selfe same terme. And if your Lease began at Michelmas, for xxi. yeeres, then it must needes ende at Michelmas the same yere that the whole xxi. yeres are expired in, and if at Midsommer, then it must ende at Midsommer the same yeere, as the last question and example doth plainly shew.

¶ And this I trust may suffice for the instruction of the vse, order, and commoditie of the said Computation.

A COMPVTATION of yeeres.

A declaration of these two Tables.

BY the first of these two Tables, may ye know the Circle of the sunne and Dominicall Letter

ter orderly and perfectly for euer, any time past, or any time to come, which Maister Graftons rondle could not do, if ye list to extend it aboue 1615 in the place of 1588. set 1616. and so count orderly as yee did at the first for any yeere to come. And for any yeere past, do thus, in the place of 1615. set 1587. and so count vpward till the yere ye seeke, and in like manner do by the Table that serues to finde the Prime and Epact, and so are they perpetuall without altering, which no one rondle can performe.

¶ Otherwise for the circle of the sunne and Sundayes Letter. Ad to the yeere of our Lorde 9. and deuide by 28. and the rest shewes the Circle of the Sunne, whereto in the Tables aunswers the letter dominicall, as in this example, to the yere 1588. I ad 9. which makes 1597. which deuided by 28. the quotient is 57. and the remain is 1. which is the circle of the sun for thys yeere, wherewith I enter the table, and finde that G F aunswereth thereto, which is the dominicall Letter for this yeere being Leape yeere, and so of the rest.

¶ The Leape yeere as yee may perceiue by the former Table, chaungeth euery fourth yeere, for when ye may deuide the yeere of our Lord into 4 parts, then it is Leape yeere.

The Golden number and Epact.

The Prime is a number that beginneth with one, and increaseth yeerely one, til it come to 19. and then beginneth againe, and thus may ye find it. To the yeere of our Lord ad 1. and deuide it by 19. the rest shewes the Golden number for that

yeere

yeere, and for ease of working, ye may leaue 1500 and deuide the reſt, as for example, by this yeere 1588, which is more thē 1500. by 88. the which I deuide by 19, and there reſts 12, which is the Prime or golden number for this yeere that preſent is, and the next yeare ſhall be 13. & ſo foorth till 19.

For the Epact.

The Epact or concurrant is thus found. Multiply the Prime by 11, and take away 30, and the reſt is the concurrant or Epact. As for example, 1588. 12. is the golden nūber, which multiplyed by 11, makes 132, which deuided by 30, reſteth 12, ỳ Epact for this preſent yeere. Or thus more eaſily. Ye muſt imagin 3, places, & on the thombe moſt furthy, that is the roote of the thombe ỳ firſt, and the middle ioynt the ſecond, and the toppe of the thombe the third, then in the firſt place, which is the roote of the thombe, put this number 10, & in the middle ioynt of the thombe 20, and at the toppe 30. this put in memory, by ỳ order of theſe places ſhalbe counted the goldē number. As one in the firſt place or roote, and two in the ſecond or middle ioynt, and three in the third place, then ſo returning, ſet 4, on the roote or firſt place, 5, on the ſecond, &c. till yē come to the golden number for the yere, for the which you ſeeke, and the number of that place muſt be ioyned with the golden nūber of the yeare, and that that it amounts to, ſhall be the Epact, ſo that it paſſe not 30, but if it paſſe 30, let goe 30, and the remaine is your requeſt. As in this example I will expreſſe it more plain. In the yere of our Lord God, 1588. the Prime is 12. which counted by the ſaid three places of the thombe, endeth at the third, where this number 30. is placed, which both added, make 12, the very Epact for this preſent yeere, &c. And note

that

that the Epact beginneth the first day of March, and the Dominicall Letter and Prime the first day of January.

To know the age of the Moone.

¶ The Epact knowne, to know the age of the moone ye must haue three numbers. The first is the Epact, the second the number of the months from March (including both) the third ye dayes of that month passed, then ioyne these three numbers together if they rise not to 30. so old is the Moone, if they passe 30, being left, they also are the age of the moone, this is meant by the monethes that haue 31. dayes, for in them that haue but 30. dayes, the coniunction is at the 29, day and they that passe 29, are the age as before.

As for example.

¶ This yeere for the 15, of August, I would know the age of the moone. First the Epact is 12, and the monthes frō March to August, are 6, and 15, the day of the month, which all put together makes 33. from whence take 30. & there rests 3, the age of the Moone that day.

Another example.

¶ For the 8. of Septem. the Epact being 12. the Monethes 7. and dates 18, added together, makes 37. from whence take 29. for Sept. hath but 30. dayes, and there rests 8, the age of the moone for that day, and in like manner shall wee giue to Febuary 29, dayes of the moone.

And

¶ And to knowe the day of the Chaunge, do thus. To the Epact adde all the Monethes from March, and if they ioyned together come not to 30. loke what they lacke of 30, and at so many dayes of the moneth the Moone chaungeth. If they be aboue 30. and the Moneth of your desire haue 31. dayes, then substra. 30, but if 30. dayes. then substra. 29. and that rests take from 30. then loke what remaines, and at so many dayes of the moneth, the Moone chaungeth.

As for example. In the yeere of our Lorde 1573. the Epact is 26. and Sept. from March 6. which added together make 32. from which take 29. because September hath but 30. dayes, and there rest 3. which being taken from 30. leaues 27. vpon which day the Moone chaungeth this yeere in September. Againe to make it more plaine, I will proue by March that is past. The Epact is 26. which take frō 30. (because March hath 31, dayes) and there resteth 4. which is the day of the change. And to know the full or opposition, ad to the change day, 14. dayes 18. houres & for the other aspects is made this Table that followeth.

12	9	36	18
13	10	24	17
14	11	12	16
15	12	0	15

The vſe of this table is thus, the age of the Moone once knowne, and founde in the ſide of the Table, then aunſweting thereto, ſhall yee ſee the howres and minutes of her ſhining to be counted from the ſunne ſetting, all the increaſing till the ful, and till then ſhee ſhineth in the euenings, and after the full, ſhe ſhyneth before the ſunne dooth ryſe in the morning, ſo many howres before the ſun ryſeth, as the table ſheweth, & for her riſing and ſetting, doe thus all the increaſe, adde to the howres of the ſun riſing, the howres found in the table, & it ſhewes the howre of her ryſing. Againe, adde to the howre of the ſunne ſetting, the howres and minutes found in the table, and that is the howre of her ſetting. Then after the ful for her ryſing do thus, from the ſunne ryſing, take the howres found in the Table, & the reſt ſhewes the ryſing, and frō the howre of the ſunne ſetting, take the howres founde in the Table, (borrowing twelue, if the ſubſtraction cannot els be made) and the reſt ſheweth the ſetting of the Moone.

All theſe aforeſaide, by example ſhall be made manifeſt.

☾ The 30. day of September, 1588, I finde the moone to be 21. dayes olde, wherewith I enter the Table, the moone decreaſing, and finde ſeauen howres two minutes aunſwering thereto, ſo I ſay the moone ſhyneth ſeauen howres 2, minutes in the morning before the ſunne riſe, and the ſunne the ſame day riſeth at 6, and 12, minutes, whereto I put 12. howres, elſ coulde not the ſubſtraction be made, & it makes 18. howres 12. minutes, from which I take 7. howres 2, minutes, & there reſtes 11. howres 10. minutes before midnight, at which inſtant the moone ariſeth.

Another example.

☾ The 20. day of October, 1588, the moone is 10. dayes old, wherwith I enter the Table, the moone increaſing, and find 8, howres aunſwering thereto, which ſheweth that the moone ſhyneth 8, howres in the euening after the ſunne is ſette, and the ſunne the ſame day ſettes at 5, a clocke, 15. minutes, whereto I put 8, the howre of the Table, and it makes 13. howres, 15. minutes, frō which I take 12. which is midnight, and there reſteth 1. howre 15. minutes, which ſheweth that the moone ſhall ſet the ſame day at 1. a clocke 15, minutes after midnight. Likewiſe the ſame day the ſun ryſeth at 6. of the clocke, 41. minutes, to which I adde 8. and it makes 14, howres 41. minutes, from it I take 12. (for that is noone) and there reſtes two houres, 41. minuts, which ſhewes, that at 2. of the clock 41. minutes after noone, the moone ryſeth, though to vs vnſeene. And ſo for all other times.

A rule to knowe the howres of the night by the ſhadow of the Moone in any Sunne Dyall.

FYrſt knowe the age of the moone, then hauing a ſun Dyall, ſee where ☽ moone gyueth ſhadow, and from the ſame take the howre & minute aunſwering to the ſame if the moone increaſe, and the reſt ſheweth the howre after mydnight, but after the full, all the wane adde the ſame, and that ſhewes your deſire.

Example.

☾ The moone beeing 10, dayes old, and in the Dyal ſhee poynteth by the ſhadowe the fift howre, from that I take foure, which aunſwereth to tenne, becauſe ſhee increaſeth, and ſo reſteth one, which ſhewes that it is one of the clocke at midnight. Againe, ſhe beeing twentie and one daies olde, poynteth in the Dyall the 11. howre, thereto I adde 4. howres, and 48. minuts, and it makes 15, howres 48. minutes, thence I take 12, and there reſteth 3. howres & 48, minuts, the true howre of the night.

60. A rule to know the howre of the day, eyther afore noone or after noone, by the beames of the Sunne, and the length of the Ruler, as followeth.

First ye must haue a Rule of 3, or sixe ynches long, which must be deuided into twelue parts, as in the figure following, (which so prepared) when ye will know the howre of the day, set your rule or staffe vpright vpon a plaine leuell boorde or grounde, and take the iust length of the shadow, what parts of the rule it cõtaineth, wherewith enter the Table folowing, and against the degree of the sunne for that day, seek the length of the shadow, and in the head of the Table, yee shall see the houre of the day, either in the forenoone or afternoone, as your discription shall discerne, for that the sunne hath like altitude at like distance from the Meridian lyne in the forenoone ascending, and in the afternoone descending, if yee finde not the iust length, take the greater number next to it in the forenoone, and in the afternoone take the lesser next thereto, and each shall giue you the howre past, as in this example.

¶ The 23. of November, when the sunne is in the 10. of Sagittarie, I woulde knowe what howre it is by the sunne. I sette vppe the deuided Rule, and the length of the shadowe is 57, partes long, that is 4, times the length of the Rule, and 9. parts more, which shewes that it is tenne of the clocke in the forenoone, or two of the clocke afternoone, which is easily discerned.

Another

Another.

The 5. of December, the sunne beeing in the 23. degree of Sagittarie, I find the shadow to be 52. parts, that is, foure times the rule & foure ouer, which sought in the Table against the 20. degree of Sagittarie, for it is neerest (for so must yee alwaies do when the number yee seeke is not precisely found) and finde not 52. but the neerest lesse is 47. and the next aboue is 62, the difference is 15. then take 47. from 52. and there rests 4, then try by the rule of proportion, if 15. giue 60. for so (many minutes bee in one howre) what shall 4, giue, multiply the second by the thirde, that is 60. by 4. and the product or ofcome, will be 240. which deuided by the first, the quotient will be 16, which shewes, that it is eyther 16. minutes before 11, in the forenoone, or 16, minutes after 1, of the clocke in the afternoone, and so of all other, which in mine opinion, is the most precise horologie that may bee, though at the first it seeme somewhat hard, the Table followeth.

A Table to know the howre of the day, by the ſhadowe of the Sunne.

A description of the order and vse of the aforesaid Table as followeth.

FIrst note, that the said Table is deuided into fiue colomes or places. In the first is the Prime, in the second the Dominicall Letter, in the thyrd, the first Sunday in Lent, in the fourth, Easter day, in ỳ fift, Rogation weeke, and in the sixt, whitsunday.

¶ And for the better vnderstanding of the vse therof, ye must alwaies when ye desire to know the time of any of the saide Feasts, first consider what yeere of the Lord it is that yee would knowe them in, and then looke the Prime of that yeere, and the Dominicall Letter, and those you may easily finde and learne in the title Table for that purpose, that is before set forth. And when ye know the Prime and Sundaies Letter, then come to thys Table, and it will easily shew you your desire.

Example.

¶ I would know in the yere of our Lord, 1588. when shall be the first sunday in Lent, Easter day, &c. First I goe to the Table aforesaid, and there in the first colome, I seeke out the yeere of our Lorde, 1588. & in the second colome directly against that, there I find that yere the Prime to be twelue, and vnder that, the Dominicall Letter to be G. F. ¶ Then I come to the abouesaid Table, and first vnder the title of the Prime, I seeke for the number of 12. and when I haue founde the same, then I looke downeward among the Sundayes Letters for the next F. that is after the Prime, for ỳ is the Sun-

dayes

dayes Letter for that yeere, & when I haue founde F. I goe forward in that lyne where F. standeth, and first I finde that the 24. day of February that yeere, shal be the first Sunday in Lent. The 7. day of Aprill Easter day. The 12. day of May Rogation sunday, and the 26. day of May, whitsunday. And thus may you doo with all other, both for time past, and time to come, for euer.

¶ Note also that this Table in the beginning, sheweth the lowest Month and day in the yeere, that Easter and all other moueable feastes doe fall on. And in the end, it sheweth the highest Month and day, that Easter, and the moueable feasters doe ascend vnto: so may it be truely saide, that it is a perfect Table.

¶ And yet hereunto will I adde one Rule, which though it be in olde & rude meeter, yet is it worthy of memory, and it is the same rule whereby thys Table was made, which is thus.

In March after the first C.
Looke the Prime where euer it be:
The third Sunday after, Easter day shall be,
And if the Prime on the Sunday be,
Then reckon that for one of the three.

A rule to know certainlie the Dogge-dayes.

¶ The dogge-dayes doe alwaies beginne the sixt of Iulie, and end the seauenteene of August.

A yeere hath
- By the course of the sunne xii. monethes.
- By the course of the moone, xiii. monethes.
- Of weekes, fifty and two, that is, 365. dayes, except it bee Leape yeere, and then it hath 366. dayes.

A rule to know all the Vigiles and fasting dayes throughout the whole yeere.

With mooueable feastes, I will begin,
As Easter, Ascention, and Whitson euen:
The Rogation weeke in like case,
Must be kept as it commeth in place.
And the Apostles, as Peter and Paule,
Iames, Mathy with other moe:
Andrew, Mathew, and the rest as they fall,
Bartholmew, Thomas, Iohn Baptist also.
Simon and Iude, and the Purification,
The birth of Christ, and the Annunciation
Ember, Fridayes, and Lent as it doth come,
The euen of all Saints, & so we haue done.

A rule to know how many dayes euery Month in the yeere hath.

Thirtie dayes hath Nouember,
Aprill, Iune, and September,
February hath xxviii. alone,
and all the rest haue thirty and one.

A Table for the Tydes.

A declaration of the Tables last before mentioned.

If you desire at any time to knowe when it is a full sea, or high water at any Port or Haue in England, Wales, or Ireland, or in any other part of the world. If first by your own knowledge, or the knowledge of any expert Mariner, you know when you see the Moone in such a parte of the firmament, that then it is full sea at such a porte or Hauen, then these Tables shall be needelesse for you. But if you cannot so do, and woulde learne, then resort to these Tables, and first consider with your selfe, how many daies old the Moone is, the day that you desire to knowe the tyde. And in the myddle of the sayd Tables, you shall finde in the uppermost part of them thys tytle, The age of the Moone, and right against the day of the age of the Moone, you shall finde on both sides, the places and poynts of the firmament, as South, South and by West, and South southwest. &c. And next under the lyne are these letters, H. M. which signifie howers and minutes. Then hauing in memory the age of the Moone as afore said, goe directly to the tytle of that place of the Firmament, to which when the Moone commeth, maketh a high water, and there you shall finde the howre and minute when it is full Sea in that place.

Example.

I would knowe at what howre it wyll be a full sea, or high water at London Bridge, the 12. day of December next, being in the yeere of our Lord, 1588.

Aunswere

Aunswere.

¶ Fyrst resort you to the former Table that teacheth you to know the age of the Moone at all times, and by that rule you shall fynd, that the foorthe day of December nert, the Moone shall be foure dayes old: Then looke vpon the tymes in the vppermost part of the aforesayd Tables, and among them you shall finde London.

¶ And directly in the nert vnder the same, you shal finde Southwest, the which declareth, that when the moone is in the Southwest, that then it is full sea at London bridge. Then goe downe the lyne of the age of the moone vntill you come at the fourth day, and there you shall find at the left hand of the same, directly vnder the lyne where Southwest standeth, these figures 6. 14. which is sixe of the clocke and twelue minutes, at which time the aforesaid 12. day of December nert, shall be high water at London Bridge.

¶ And in the vppermost part of the aforesaid Table, I haue written the names of some ports, at which time the moone comming to the place, coulleth a full Sea, and vnto them ye may adde such other as you haue or shall haue knowledge of.

A Rule to know by hart what part of mans body is subiect to any of the twelue signes.

THE head and face doth Aries rule,
as Taurus doth the necke:
But armes and hands in Geminies power,
doth suffer ioy or wreck.
Cancer doth guide the brest, the longes,
the ribs and stomack stout,
Leo likewise hath hart and backe,
thereof yee needs not doubt.
The belly and bowels Virgo hath,
and eke the entrals all:
The loynes, the kydnies and the raines,
to Lybraes lot doth fall.
The blather and the secret parts,
to Scorpio are the fees,
The thyghes doth Sagittary guide,
and Capricorne the knees.
The legs to Aquary belong,
to vse them as he lust,
But Pisces holdes the feete and heeles,
and so for euer must.

A Table shewing what signe the Moone is in, and shall be for euer, and also what part of mans bodie euerie signe dooth gouene, wyth the infirmities incident thereto.

A declaration of the Table

that is on the other side, shewing at all times what signe the Moone is in.

FIrst, for the better vnderstanding therof, note that this Table is deuided into fiue tytles, that is to say, into moneths, dayes, Prime, signes, and gouernement of the signes. Nowe if ye will know at any time, what signe the moone is in, you must first seeke out the sayde Table among the moneths, for the moneth wherein you desire to be certified, and likewise among the tytle of the dayes, for the day of the moneth that ye desire. And when yee haue found them, then begin at the month, and tel the same for one day, and so goe forth vntill you come to the number of the dayes that ye would haue, and note well what day the same doth ende vpon, and keepe it in your memorie. Then seeke for the Prime of that yeere among the tytle of Primes, and accounting the Prime for one, tell so many dayes as before you committed to memorie: and then on the right hand ye shall finde what signe the Moone is in, and what member of mans body it gouerneth, with the infirmities therto pertayning.

Example.

IF I would knowe the eyght day of December, next, in the present yeere of our Lord, 1588. what signe the Moone will bee in. First I looke in the aforesaid Table, and among the tytle of the moneths, and there I finde December, placed against the figure 4, which is the tytle of dayes, and there I beginne to reckon,

reckon, and call that figure at 4. one, and so tell downwarde vntill I come to 8. and I finde that the same endeth vpon 12. which number I keepe in memorie. Then I seeke for the Prime of thys yeere, which is 4. among the title of Prymes, and on the left side therof, standeth 11. and there I begin againe and call that 11. one, and so goe downeward till I come to the number which I had kept in memorie, which was twelue, and on the right side thereof, I finde the signe to bee Capricorne, which gouerns the knees, with his infirmities, itching, red spots, leprosie.

¶ A perfect easie, and readie rule, to knowe in what signe the Moone is in euery day.

When ye know the age of the moone, double the same, and then deuide it by 5. and the quottient shall shewe you how many signes ye shall adde to the signe that the Coniunction was in, and the remaine euery vnitie therof, giueth 6. degrees. which ye must adde to the degree of the sunne, the day of ☌, if they passe 30. adde one signe, and the rest wyll shewe the degree of the signe or very neere: but of the signe it will neuer fayle for suretie.

Example

☾ This present 18, of October, the moone is 23. which doubled is 46, and deuided by 5, the quottient is 9. and 1. rest 1. that is 9. signes and 6. degrees, which I adde to the signe and degree of the coniunction, (that is Virgo the 12.) and it 69. 17. and so of all others.

¶ Certaine elections that are to be chosen by the course of the Moone, in any signe of the Zodiack. And first of blood letting.

LEt blood at no time without great cause, for it weakneth and maketh way to many diseases, but if ye do, see it be after good digestion and fasting, in any temperate day, and afterwarde vse fine meates of light digestion, abstaining from all exercise, as bathing, watching, and carnall copulation. Next consider the time of the yeere, if it be in spring, let bloode at the right side, and in the harvest at the left. Thirdly the age of the person: for young persons, from the change to the first quarter: for them of middle age, frō the first quarter to the full, & for elder persons, from the full to the last quarter, and for old folke, from the last quarter to the change. Fourthly consider the parties complection. If it be collerick, then let the moone be in ♋ or ♌ the last halfe, or ♐. If it be phlegmaticke, in ♈ or ♐. If he be melancholy in ♎ the first part, or ♏. But if he be sanguine, let the moone be in any of the foresaid signes, onely beware you let not blood, in any member when the moone is in the signe that ruleth the same, neyther the day of the change, nor the day before, nor the day after, for that were perrilous.

The best tymes to purge, if that time be temperat	by drinks, by electua, by pylles.	Luna in	Scor. Can. Pisc.

To enter bathes for hote diseases. Scor, Can, Pisces.
For cold diseases. Aries, Leo, Sagit.
To stop fluxes, rumes and lasex. ♉ or ♍
To take preparatiues. Aries, Leo, Sagit.
To take vomits. Leo, Aries, Capri. To take Gargarists. Aries, Cancer, Capri. To take Glisters. Libra. Scorpio

God

God to comfort the vertue: { Attractiue, Retentiue, Disgestiue, Expulsiue. } the Moone in { ♈ ♌ ♐ ♉ ♍ ♑ ♊ ♎ ♒ ♋ ♏ ♓ }

To cut hayres that they may growe better, Taurus, Virgo, Libra, and Luna increasing.

To geilde or lib Cattell, Sagita. Capri. Pisces, and Luna decreasing.

Good to sowe or set, Taurus, Cancer Virgo, Libra, Capri. and Luna decreasing.

To graffe or plant, Taurus, Aquarius, and Luna increasing.

To cut Vines, Aries, Scorpio, Libra, and Luna increasing.

To fell wood for Timber, from saint Barnabes day in June, till the 1. Calend. January, in the wane of the Moone.

To set fyre wood that the stocke may come spring, from the chaunge to the first quarter.

To remoue grafters or young Trees, at the last quarter of the Moone.

¶ A description of these two Tables following.

THese two Tables following, shall perfectly shewe you the breake of the day, sunne rysing, length of the day and night artificiall, the setting of the sunne & twylight for the whole yeere, whereby ye may knowe the Planetarie howre, and what Planner doth raigne any day or howre for euer, the vse is thus.

¶ In the first collome looke for the Month wherin ye are either descending, or ascending, then in the next collome thereto, finding out the day, or the next thereto, and right there against toward the right hand if ye descend, ye shall finde the howre and minute of any of the aforesaid in the collome vnder the tytle therof, but if ye ascend by the right side of the Table, then looke toward the left, and do as before, the worke is easie, it needes no example at all, but because I promised to make it as plaine as might be, I will shewe an example sufficient, and that is thus. The 22. day of September, I would knowe all that is aforesaide. I enter the Table descending by September, and finding the 22. day against the same in the collome vnder the tytle breake of the day, I find 4. 20. which sheweth there at 4. of the clocke 20. mynutes in the breake of day. In the next 6. 18. which shewes the sunne rysing, in the third collome 11. howers 24. minutes, the length of the day, and 12. 36, in the fourth, the length of the night, 42. the setting of the Sunne, and 7. 40. the twilight, or the going downe of the day light, and so of all other dayes.

Iupiter.	0	10	7	11	8	12	9	Luna.
Mars.	0	11	8	12	9	0	10	Saturne.

The vse of this Table is thus.

VNder the day of your request, seeke the howre that ye desire, then on the left side right there against shall yee see the Planet that gouerns that howre by day, and at the right side the Planet that rules it by night, as thus. On Thursday the thyrde howre of the day rules ☉ & the 8. howre of the night gouerns ☽ and so of the rest, for it is plaine enough.

A Table to knowe the length of the Planetary howre, from *the shortest day and longest night*, tyll the longest day and shortest night, of what length soeuer the day or ayght be.

17	1.20	1.26	1.27	1.28	1.20

The vse is thus.

¶ Knowe the length of the day or night, that ye require by the Table preceding in howres and minutes, and therewith enter this Table, the howre at the side, and the neerest minute at the heade, and then descend right against your howre, and there in the common angle, ye shall finde the howre and mynute, or minutes onely that the Planet raigneth by the howres of the clockes.

As for example.

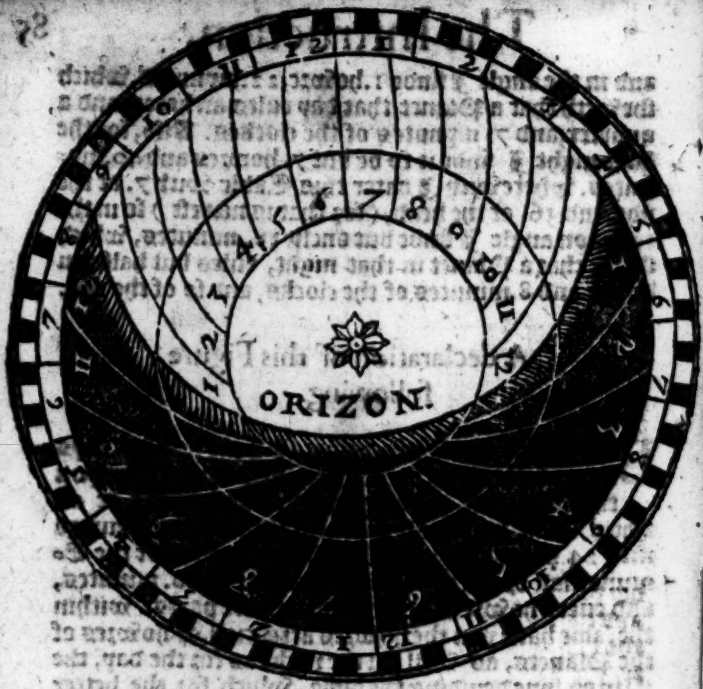

¶ The 12. of June, the day is 16. howres, 20. minutes, wherewith I enter this Table as is shewed and

and in the angle I finde 1. howre, 22. mynutes, which sheweth that a Planet that day rules an howre and a quarter, and 7. mynutes of the clockes. Also, for the same night I finde it to be but 7. howres and 40. mynutes. Wherewith I enter this Table with 7. at the side, and 36. at the head, (for that is nearest) so in the common angle I finde but onely 38. minutes, which shewe that a Planet in that night, rules but halfe an howre and 8. minutes of the clocks, and so of the rest.

A declaration of this Figure following.

But for more ease in account I haue deuised this figure following, which presently shall shewe you the howre of the Planet by day or night at all times. The vttermost margent whereof, is deuided into 24. parts, representing the 24. howres of the Equinoctiall or clockes, which euer are of 60. minutes, and euery howre is deuided into foure parts. Within the same haue you the howres artificiall, or howres of the Planets, as well for the night as for the day, the Orizon lyne deuiding the same, which for the better knowledge is bedecked with shadowes, and all that is aboue the same is accounted day, because wher the Sunne comes vpon the lyne in the East, it is day, for then begins the day artificiall: And when the sunne comes to the same in the west, hee departs from our sight, and then begins the artificiall night. So likewise all vnder the same is is night, and therfore printed blacke, in the center wherein must bee put a tined with a knot, or a small Beade to be remoued at your pleasure.

The

The vſe thereof is thus.

¶ Know by the Table for that purpoſe, the riſing of the ſunne for the day ye deſire, and vppon the ſame howers and nereſt quarter, in the vttermoſt margent lay the threedde, removing vp and downe the knot or Weade, till it lye vpon the Orizon lyne, there holde it ſtedfaſt at the center ende, and remoue your other hand to the howre of the clock, called the howre of the day, either before noone or after, then the knot among the Planets howers, ſhall ſhewe the iuſt howre of the Artificiall day expreſt by figures of Arithmatique, whrrewith enter the Table of the Planets, with the day

day at the heade, and so the number of the howze shall shew you at the left side, the Planet that rules by day, and at the right side, the Planet that rules the same howze by night.

Example.

☌ The 20. of October being Tuesday, I would knowe what Planet raignes at three of the clocke, 30 minutes after noone. By the table of the sunne rysing I find that the 20. day of October, the sun ryseth at 7. of the clock 15. minutes, which found in the figure, I put the thred thereto, and set the knot on the Orizon, then remoue I the thred to 3. of the clocke, 30. minutes afternoone in the margent, and the knotte shewes the eleuenth houre of the artificiall day, wherewith I enter the Table of Planets vnder Tuesday, and right against 11. at the left side is ♂ which rules that present howze.

☌ Againe at tenne of the clocke at night I would doo the like, I remoue the thred to ten in the margent, and the knot amongst the howzes of the night, shewes the 5. howze of the artificiall night, wherewith I enter the Table as before, and find right against 5. at the right side ☿ which rules that present howze. &c.

Thus done, if ye desire to know how long the Planet of that howze hath ruled, or how long he shal rule, doe thus. Set the thredde to the time that ye desire to know the Planets howze, and if the knot light vppon the time that deuides the artificiall howzes, then and at that instant begins the planetarie houre, but if the knot fall within the space, remoue your knot to the lyne proceeding, then shall the thredde in the margent shew at what time the Planet began to raigne, afterward remoue the knot to the lyne following, and the thred in the margent will shew you the instant of the clocke when the Planet shall ceale to rule, whereat take this example.

☌ Sun-

¶ Sunday the xxvij. day of March, the sunne ryseth at 5. of the clock, 3. minutes, and at 14. minutes past 9. of the clock, I finde by the foreland rules of the moone to raigne at that instant, because the knotte falles in the midst betweene the lynes, then sette I the knot back to the lyne, and the thred sits vpon 30. mynutes after 8. then began Luna to raigne. Then remoue I the knot to the lyne following, and the thred doth marke in the margent 45. minutes past 9. of the clock, and then doth the moone end her dominion for that time, till her course returne, then take I 30. out of 45. and there rests 15. and so long raigneth a Planet at that time.

The Properties and effects of the Plannets.

Saturne is an enemie to humane nature, a destroyer of life, maleuolent, cold, dry, earthly, masculine, of the day, the greater infortune of mans body, he rules the right eare, the spleene, the blather, & the bones, of humours melancholy mixt with fleame, of persons olde men, Husbandmen, mowers, masons, Tanners, Iewes, Enuious persons, stubborne, solitarie, slyll, leane, beardlesse, couetous, gluttons, deceiuers. Husbandrie, fruites of the earth, mynes of mettalles, treasures, buildings, heritage of the dead, possessions, grounde, and hath of colours blacke. The greatnes of his body is 91. times so bigge as the earth, the quantitie of his beames are 9. degrees forwarde and backwarde. He makes his reuolution or passeth thorow the Zodiacke in

in 30. yeares. His fewest yeares are 30. his meane 43. his greater 57. and his greatest are 465. yeers, hee is expressed in likenes of an old man, leaning on a staffe, or holding a sithe in his hand, thus ♄

Iupiter is the greater fortune of the day, hotte and moiste, benevolent. Hee rules in mans bodie, the lyuer, lights and lungs, the ribs, the arteryes, the blood, the seede, pulses, and the left eare. Of humors, the sanguine. Hee signifieth Bysshoppes, Prelates, Lawyers, Iudges, shamefast, gentle and humble, iust, honest, true, faithfull, liberall, vertuous and religious, Gouernours of Cittyes, & rich men, Ecclesiasticall dignities, religion, iustice, honestie, prayse. Of colours, blewe, or cytrine. The greatnes of his bodie is 95. times so much as the earth. The quantitie of his beames are 9. degrees: he endes his course in 12. yeares almost. His fewest yeares are 12. his meane yeares are 45. and a halfe, his greater yeares are 79. and his greatest yeares of all are 428. And to shewe forth his threefolde thunderbolts, hee is expressed with three draughtes thus, ♃ which is not much vnlike a mace or scepter of honour, as some very aptly haue imagined.

Mars is the lesser infortunate masculine, of the night, immoderatly hotte and dry. Of mans body he governs the gall, the veines, synnowes, stones, and the left eare: of humours, the cholericke: and of colours red. He signifieth of persons, the warriours, seditious, disdainefull, conjurers or conspirers, yrefull, theeues, cruell, bolde, irreuerent, murtherers, Captaines, Chirurgians, Turkes, terrible, violent, careles, workers in fire-works, Gunners and founders, warre, strike, dyssention, tyranny, violence, armorie, Alchemy, and all thinges wrought and done by the fyre. The greatnes of his body, is once so bigge as the earth, and halfe so

bigge again, and one eighth part of the same. The quantitie of hys beames are 8. degrees. He endes his course in two yeeres almost, his fewest yeeres are 15. his meane yeeres 40. and a halfe: his greater yeeres are 66. and his greatest yeeres are 264. and because he is the God of warre, he is armed with a dart, thus. ♂

Sol is the light & Lampe of heauen, and giues life naturall to all things, hee is an indifferent Planet, moderatly hot and dry, masculine of the day, fortunate by aspect, but infortunate by corporall coniunction. He rules of mans body, the braine, the marrowe, the ioynts, the right eye of a man, & the left eye of a woman. Of colours, deepe yellow or golde colour. Hee signifieth Kings, Princes, Magistrates, famous persons, desirous of honor, and ambitious. Also Kingdomes, Empires, Nobilitie, magnanimitie, fortitude, glorie, rule, honor. The greatnesse of his body, is 166. times so big as the earth, and somewhat more. The quantitie of his beames are 15. degrees. He passeth thorough the 12. signes in 365. daies, and 6. howres almost. His fewest yeeres are 19. his meane yeeres are 69. and a halfe: his greater yeeres are 120. and his greatest yeeres are 146. and because he beares the Image of Apollo, hauing a golden Apple in his hand, therfore in that likenesse, or by a round circle, he is figured thus ⊙

Venus is the lesser fortune, feminine of the night colde and moyst, temperate, benevolent. Of mans bodie, she rules the throate, pappes, belly, raynes, matrix, ioynes, fat, splene, and the buttockes. Of humours, fleame: of colours, greene and whitish. She signifieth of persons the faire conditioned, the mercifull, meeke, the fine, pleasant, & delightsome, the effeminate, louers, daunсers, banquerers, musitions and Poets. Also stabilitie, ioylitie, loue, mercy,

mirrey, beautie, giftes of friendes and women, mariage, dowrie, ornaments, Jewelles, luſt and lecherie. The greatnes of her body is the 37. part of the earth. The quantitie of her beames, are 8. degrees. She endeth her courſe as doth the ſun, her ſmalleſt yeeres are 8. her meane yeeres are 45. her greater yeeres are 82. and her greateſt yeeres are 1051. And becauſe ſhe beareth two dartes, one of Golde an other of Leade, ſhe is expreſt by a double draught thus ☽ or by a looking-glaſſe, which is more proper.

Mercury is conuertible, good with the good and badde with the badde, ſometime maſc. and of the day, ſometime feminine, and of the night, hote with the hote, and colde with the colde, moiſt with the moyſt, and dry with the dry Planets, as he is configured to any. Her rules al mans body, the mouth, the tongue, the thoughtes, the memory, the hands and the thighes. Hee ſignifieth of perſons, Phyloſophers, Scriueners, Merchants, Paynters, deuiſers of ſubtilties, craftie, deceitful, wauering, lying, proude, and ſcornefull. Alſo all kinde of Sciences, buying, ſelling, contracte, honeſt ſtudies diuination, and curioſity. Of colours, the ſky colour, or the ſpeckled of many colours. The greatneſſe of his body is the 32000. part of the earth. The quantity of his beames are 7. degrees. Hee makes his reuolution as the Sunne and Venus. His ſmalleſt yeeres are 20. his meane 48. his greater yeeres 76. and his greateſt yeeres are 460. Hee is figured as it were wearing a harte, or winges, thus ☿ or els more properly by his charming rod that is inuironed with ſerpents.

Luna is naturally colde and moyſt, of the night feminine, ſhe is the carryer and deliuerer of the influence of all the Planets thorowe her Orbe vnto

bs. She rules the left eye of a man, and the right eye of a woman, and of both, the stomack, the taste, the liuer, the belly and the left side. She signifieth noble women, widdowes, the vulgar sort, & those of continuall motion, as Marriners, Messengers, Legats, and vagabonds. Also all things ☽ abound in moysture, the sea and Riuers, with their ebs and floodes, the studie of histories, Embassages, Navigation, tourneying, seruice, planting, sowing, and all water workes. Of humours the fleame, of colours, white or siluer colour. The greatnes of her body, is the 39. part of the earth. The quantitie of her beames are 12. degrees: she makes her passage through the Zodiacke in 27. dayes and 8. houres, and ouertakes the sunne in 29. dayes, 12. houres or there about. Her fewest peeres are 25. her meane peres are 66. & a halfe, her greater peres are 108. and her greatest peers are 520, and because she is commonly seene horned, or halfe round shee is figured thus ☾

The Dragons head, (which is the intersection made by the cutting or crossing lines of the Orbes of the sunne or moone) is good with the good, and badde with the badde, for if it be ioyned with good Planets, it augmenteth their goodnes, and conioyned with the euill, it doth increase the malice and euill nature of them, & is figured thus ☊

The Dragons tayle, which as it is the opposite poynt to the head, so it is contrary in nature, for with the good it is badde, and with the badde it is good, for with whom soeuer it is ioyned, it doth diminish the operation of them, be it good or bad, and is expressed thus ☋

¶ The

The names of all the Colledges and Halles in both the Vniuersities Oxford and Cambridge, and of *theyr Founders*.

1 VNiuersitie Colledge, founded by Alured, king of the Saxons, in the yeere of our Lord 872. Vniuersitie Colledge

2 Bayly Colledge, founded by John Baylioll, king of the Scots, in the yeere of our Lord 1263 Baylioll Colledge

3 Martin Colledge, founded by Walter Martin, Bishop of Rochester, in the yeere of our Lord 1276. Martin C

4 Exceter Colledge and Harts Hall, founded by Walter Stapeltine Bishop of Exceter, 1316. And the sayde Colledge was much encreased by Syr William Peter, late secretary to king Henry the eight, 1566. Exceter Harts Ha

5 Oriall Colledge, founded by Adam Browne, brought to the Vniuersity of Oxforde, by king Edward the second, in the yeere of our Lord God, 1324. Oryall c

6 Queenes Colledge, founded by Robert Egliſ-field, Chaplaine to Philipe, king Edwarde the thirds wife, 1349. Queenes Colledge
